

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A packaged liquid crystal display comprising:
a containment structure having a bottom surface;
a liquid crystal cell including a die having a pixel array, a transparent plate attached to the die, and a liquid crystal material disposed in a gap region between the die and the transparent plate, the liquid crystal cell being positioned at least partially within the containment structure;
a thermal support layer formed of thermal support material arranged between the liquid crystal cell and the containment structure enabling the liquid crystal cell to float on the thermal support layer; and
a plurality of spaced apart stabilizers arranged to couple edge portions of the liquid crystal cell to the containment structure without adhering the bottom surface of the liquid crystal cell to the bottom surface of the containment structure.

Claim 2 (original): A packaged liquid crystal display as recited in claim 1 further comprising a support material arranged to support the liquid crystal cell in a floating manner within the containment structure.

Claim 3 (original): A packaged liquid crystal display as recited in claim 1 wherein the stabilizers are sufficiently compliant such that they do not induce substantial stresses in the LCD assembly.

Claim 4 (original): A packaged liquid crystal display as recited in claim 1 wherein the containment structure includes a substrate having a recess therein, the liquid crystal cell being at least partially contained within the recess.

Claim 5 (previously presented): A packaged liquid crystal display as recited in claim 4 wherein the substrate includes one of aluminum or ceramic.

Claim 6 (original): A packaged liquid crystal display as recited in claim 4 wherein the substrate is comprised of Alloy Ash 42.

Claim 7 (original): A packaged liquid crystal display as recited in claim 1 wherein the plurality of spaced apart stabilizers provide a mechanically stable system.

Claim 8 (original): A packaged liquid crystal display as recited in claim 7 including four spaced apart stabilizers.

Claim 9 (currently amended): A packaged liquid crystal display as recited in claim 1 ~~further including a thermal support material and~~ wherein the thickness of the thermal support material is between approximately 0.3 mm and 0.8 mm.

Claim 10 (currently amended): A packaged liquid crystal display as recited in claim 1 ~~[[9]]~~ wherein thermal support material is a thermal grease.

Claim 11 (original): A packaged liquid crystal display as recited in claim 1 wherein the plurality of spaced apart stabilizers prevent flow of an encapsulating material.

Claim 12 (original): A packaged liquid crystal display as recited in claim 1 wherein each of the plurality of spaced apart stabilizers are anchored solely to the side of the liquid crystal cell.

Claim 13 (original): A packaged liquid crystal display as recited in claim 1 wherein all the structures adhering to the cell have a rigidity less than the liquid crystal display.

Claim 14 (currently amended): A method of packaging a liquid crystal display assembly comprising:

dispensing a thermal support material in a containment structure;

disposing a liquid crystal cell at least partially within the containment structure and disposing the liquid crystal cell upon the thermal support layer so that the liquid crystal cell floats on the thermal support layer, the liquid crystal cell including a die having a pixel array, a transparent plate attached to the die, and a liquid crystal material disposed in a gap region between the die and the transparent plate; and

forming a plurality of spaced apart stabilizers arranged to couple an edge portion of the liquid crystal cell to the containment structure without adhering the bottom surface of the liquid crystal cell to the bottom surface of the containment structure.

Claim 15 (original): The method of claim 14 further including wire bonding a plurality of leads from the die to a plurality of leads on the containment structure.

Claim 16 (original): The method of claim 15 further including depositing encapsulating material over the plurality of leads.

Claim 17 (original): The method of claim 16 wherein the encapsulating material is prevented from surrounding the liquid crystal cell.

Claim 18 (original): The method of claim 16 wherein a cycle time for a single cell is less than five hours.

Claim 19 (previously presented): The method of claim 14 wherein the plurality of spaced apart stabilizers are arranged in manner such that substantially no stresses are imposed on the liquid crystal cell.

Claim 20 (previously presented): The method of claim 14 wherein the thermal support material is disposed such that none of the plurality of spaced apart stabilizers are dispensed below the liquid crystal cell.

Claim 21 (original): The method of claim 14 wherein the plurality of spaced apart stabilizers are anchored solely to the side of the liquid crystal cell.

Claim 22 (previously presented): A packaged liquid crystal display comprising:

a containment structure having a bottom surface;

a liquid crystal cell including a die having a pixel array, a transparent plate attached to the die, and a liquid crystal material disposed in a gap region between the die and the transparent plate, the liquid crystal cell being positioned at least partially within the containment structure; and

a plurality of spaced apart stabilizers arranged to couple edge portions of the liquid crystal cell to the containment structure without adhering the bottom surface of the liquid crystal cell to the bottom surface of the containment structure, the stabilizers being sufficiently compliant such that they do not induce substantial stresses in the LCD assembly.

Claim 23 (previously presented): A packaged liquid crystal display as recited in claim 22 further comprising a support material arranged to support the liquid crystal cell in a floating manner within the containment structure.

Claim 24 (previously presented): A packaged liquid crystal display as recited in claim 23 wherein the support material includes a thermal grease.
